

Functional Medicine Laboratory Testing Informed Consent

The purpose of functional medicine laboratory testing is to evaluate nutritional, biochemical, or physiological imbalance and to determine any need for medical referral. These lab tests are not intended to diagnose disease. This office utilizes conventional lab tests as well as functional medicine assessment.

Functional medicine assessment is designed to assist our providers and other healthcare providers in finding the underlying causes of your condition. Functional medicine has evolved through the efforts of scientists and clinicians from the fields of clinical nutrition, molecular biology, biochemistry, physiology, conventional medicine, and a wide array of scientific disciplines. Functional medicine evaluates the body as a whole, with special attention to the relationship of one body system to another and the nutrient imbalances and toxic overload that may adversely affect these relationships.

Your medical physician or providers may or may not agree with the necessity for—or our interpretation of—these tests. If you have any questions or concerns, please discuss them with our providers.
